When failure is not an option...

75% of all bomb-blast fatalities are a direct result of flying glass shards

IQue™ Safety & Security films have been the choice of security consultants, building engineers and architects, to counter the hazards of flying glass.

Engineered to possess high tensile strength and combined with a powerful adhesive system, the transparent film is easily applied onto any glass windows.

When fully cured onto glass, the film enables the window to sustain sizeable air pressure and shock waves common in explosions. Even if the glass were to shatter, IQue Safety & Security films retain glass splinters and fragments from flying, protecting occupants and pedestrians from the deadly shards of glass.

IQue Safety & Security films are also able to withstand significant penetrative force making it ideal for security applications in

commercial shopfronts and property. Installation onto existing glass is simple, without need of disruption to business or operations and does not alter the appearance of windows.

IQue Safety & Security product range includes films with built-in spectrally-selective attributes. These films are unparalleled in solar heat and infra-red rejection, with the highest light transmission (clarity) in the industry.

IQue products are widely used by governments, military, commercial and residential applications around the world. And as one of the world's leading distributors of high tech window films, with an industry track record spanning over 30 years... our customers enjoy professional advice, installation and access to arguably the best film products in the market.

All IQue Safety & Security films and solar control products are certified and tested by leading independent laboratories to meet and exceed stringent industry standards, including the ASTM F1642-04 and the ANSI Z97.1. In addition, IQue's own dedicated R&D team and laboratory also allow continual quality control and assurance for our entire product range.

Don't put off your safety and security assessment any longer. Contact the IQue Safety & Security Specialist for an obligation-free diagnosis of your window system.

ABS Consulting
RISK CONSULTING DIVISION

IQue R&D technicians and engineers worked alongside their counterparts in ABS Consulting, an internationally-recognized risk management firm, with assistance of Canadian Explosives Research Laboratory and Defense Research Establishment Suffield (DRES) to test IQue Safety & Security under simulated bomb blast conditions. IQue films meet GSA Performance Condition as well as ASTM F1642-04.
