

## Own a Piece of Stealth Technology?

Thanks to V-KOOL® technology, the very same technology that made the stealth bomber "Invisible" to radar, is also "'invisibly" keeping homes and cars shielded from solar heat and radiation.

V-KOOL®'s intelligent spectrally-selective technology is virtually clear, and is the pioneer and industry leading window flim technology in over 28 countries. Applied on glass windows, drivers enjoy cooler interiors, higher energy savings, and greater safety from shattered glass,

all without the heavy reflectivity or dark tinting found in conventional solutions.\*

Learn more about the V-KOOL® Technology that's voted the Top 100 Inventions of the Last Millennium by Popular Science Magazine and find out how to live and play with intelligence on your side.

\* V-KOOL 70 keeps out 94% of infra-red and 99% of ultra-violet radiation.
